# Adjusting Performance Engineering to Industry Trends

aws

CONTINUOUS PERFORMANCE TESTING: CHALLENGES AND APPROACHES

#### **Industry Trends**

- Web
  - Centralization, open / unlimited workload
- Cloud
  - Further centralization, price tag (FinOps)
  - Dynamic configurations / Self-Management
- Agile / iterative development
  - Continuous Integration / Delivery / Deployment
  - DevOps / SRE

The Past, Present, and Future of Performance Engineering

@ 2023, Amazon Web Services, Inc. or its affiliates

## All Interconnected

Centralization

- => Control over deployments
  - => Ability to deploy small changes
    - => Agile development
      - => Fuzzier line between Dev and Ops (DevOps, SRE)
        - => Need for continuous performance engineering

## **Adjusting Performance Testing to Agile and CI**

- Agile development should be rather a trivial case for performance testing
  - Working system on each iteration by definition
  - You need performance engineer for the whole project
    - Savings come from detecting problems early
- Addressing deficiencies of the traditional performance testing
  - Early Performance Testing
  - Continuous Performance Testing

## **Cost of Fixing Defects Earlier Is Significantly Lower**

#### CONTINUOUS PERFORMANCE TESTING: CHALLENGES AND APPROACHES

### Early Testing - Mentality Change

- Making performance everyone's job
- Late record/playback performance testing -> Early Performance Engineering
- System-level requirements -> Component-level requirements
- Record/playback approach -> Programming to generate load/create stubs
- "Black Box" -> "Grey Box"

## Integration into Agile and CI/CD

- Continuous performance testing
  - To catch regressions early
- Collecting all info needed to investigate regressions
  - In the form convenient for further analysis
- Foundation to build further automation on the top of it
  - For further performance optimization
- All context-dependent
  - Don't wait for an exact recipe, figure it out depending on your needs

## Time / Resource Considerations

- Performance tests take time and resources
  - The larger tests, the more
- May be not an option on each commit
- Need of a tiered solution
  - Some performance measurements each commit
  - Daily mid-size performance tests
  - Periodic large-scale / uptime tests outside CI

CONTINUOUS PERFORMANCE TESTING: CHALLENGES AND APPROACHES

## **Coverage Optimization**

- A multi-dimensional problem
  - Configuration
  - Workloads / Tests
  - Frequency of runs
- A trade off between coverage and costs
  - Costs of running, analyzing, maintenance, etc.

## The Challenge

- If addressed seriously, the number of workloads / tests / configurations is growing
- No good way to optimize
- One approach is to see if some results are correlated
  - If we find same problems on the same set of tests, we can use just one or few tests from this group

- Tracking Performance of the Graal Compiler on Public Benchmarks
   (Charles University / Oracle Labs)
- Combinatorial testing approaches (PairWise / Covering Arrays)
  - From functional testing

CONTINUOUS PERFORMANCE TESTING: CHALLENGES AND APPROACHES

## Addressing Variability

- Same environment / starting config
  - For example, AWS cluster placement groups
- No other load

- Multiple iterations
- Reproducible multi-user tests
  - Restarts between tests
  - Clearing caches / Warming up caches
  - Staggering / Sync points

@ 2023, Amazon Web Services, Inc. or its affiliates

### **Complex Results**

- No easy pass/fail
  - Individual responses, monitoring results, errors, etc.
- No easy comparison
  - Against SLA
  - Between builds
- Variability

## Simple Comparison

## Looking Beyond Aggregate Info

CONTINUOUS PERFORMANCE TESTING: CHALLENGES AND APPROACHES

## Operations

- Scheduling / execution tests
- Results analysis
- Triaging and escalating issues
- Maintenance

## Catching / Troubleshooting Errors

- Catching errors is not trivial
  - Building in checks
  - Depends on interfaces used
    - Protocol-level [recording]
    - GUI
    - API/Programming
    - Production Workloads
- Keeping logs / all info needed to investigate issues

## **Changing Interfaces**

- If using protocol-level or GUI scripts, minor changes may break them
  - It may be not evident
  - If recording used, a change in interfaces may require to recreate the whole script
- API / Programming is usually more stable / easier to fix
- AI to catch the changes / self-healing scripts
